

DSE Mobile Application Manager is a system to manage mobile applications. It has options to perform necessary tasks to manage a mobile application. Usage instruction is given in a separate file for individual user groups. This document explains the database structure and gives an overview of task processes. The following chart shows the database structure.

Process Overview

General Overview

The system requires User, Settlement and Admin user groups for working. User makes the new code entry i.e. uploading the documents, settlement approves or requests the user to reupload the document and admin activates the code.

Software used

- 1. MySQL Server & MySQL workbench (MySQL installer community 8.0.0.22)
- 2. PHP 7.3.25(x64)
